

Major Project

Questions:

1) What are the most common emotions/words used by Males and Females?

A) Most common word used by Males: 'the'

Most common word used by Females: 'and'

2) What is the highest tweet_count got by a male and female?

A) Highest tweet_count got by a male: 110964.0

Highest tweet_count got by a female: 31462.0

SUMMARY:

After applying Train/Test split method and comparing the three classification models i.e. Logistic algorithm, KNN($n=1$) and Decision Trees, we conclude that Decision Trees algorithm suits best for the given data set with 84% accuracy and the Logistic with next highest accuracy of 51.6% and last KNN with 51.3% for $k=1$.

However, since we only used train split method for accuracy calculation, we got decision trees with highest accuracy. However, if we use other methods like cross-validation or training model with entire data set we get different accuracies and different algorithm model with highest accuracy.
